

A lateral chest X-ray image. The upper portion of the image shows the thoracic spine and ribs. The lower portion shows the lung fields. There is a large, dense, wedge-shaped opacity in the posterior (lower) part of the lung field, which is characteristic of a pleural effusion. The label 'Airspace opacification' is positioned at the top left of the image, and the label 'Pleural effusion' is positioned below it, both in white text on a black background.

Airspace opacification
